

# Affirmation & Platform Connectivity

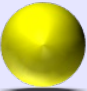

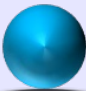

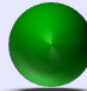

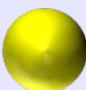

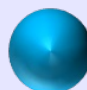

Message Automation provides a single, configurable platform for all derivatives trade flows related to affirmation, confirmation execution and clearing. The network of connections now required to CCPs, Brokers, SEF's and industry middleware means that many organisations are looking to implement more robust and strategic connectivity approaches.

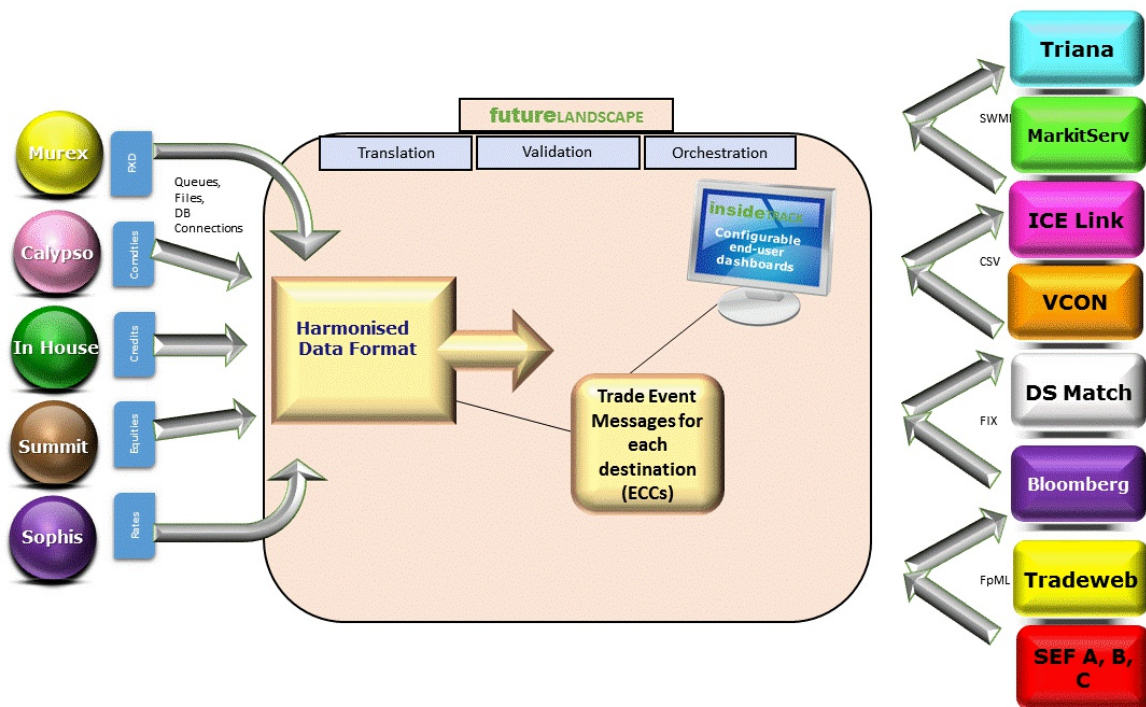

Our rules-based futureLANDSCAPE solution provides just that:

- Proven MarkitWire, Traiana, ICE Link and VCON links
- Direct or indirect (via the above) connectivity to major SEF platforms
- Direct connectivity to the CCPs in Europe, US and Asia if required

Sitting over all of the connectivity and reconciliation processing are a set of user-defined dashboards providing the detailed and exception views that ensures efficient operational management of the processes. This includes taking in and displaying in an operational format the reports from the clearing Houses.

## Feature benefits

 <p>Pre-built connectors and message flows for multiple current and future external services - clearing houses, SEFs and affirmation platforms</p>	 <p>Intelligent content based trade flow routing</p>	 <p>Common solution across asset classes, and for multiple internal roles</p>
 <p>Rule based message validation and eligibility checking</p>	 <p>Single point of reference for internal connectivity - primary trading systems; risk and limit checking, e-commerce, back office, etc.</p>	 <p>Proven messaging framework to handle trade lifecycle events</p>

## About Us

Message Automation is the leading specialist provider of Post Trade Control solutions. We help clients manage the multiple trade processing challenges created by new regulations and market practices across all asset classes in OTC, ETD and FI markets. Established since 2003, our clients includes tier one and tier two investment banks and buy side firms.
